This Report reveals:

- How SOA governance provides linkage between corporate governance and IT governance.
- Why people and processes are more critical to SOA governance than the supporting technology.
- How to ensure the service architecture is designed for the benefit of the whole organisation, not just the initial project.
- How to monitor the health of the runtime environment in a continuous fashion.
- Why business policies should be enforced dynamically through active runtime components.
- How to address the complexity of SOA change management.
- How leading companies have deployed SOA governance in their own organisations.
- Which vendor solutions can be deployed to support the different phases of SOA governance.
